Business Problems ERP Can Help Solve

Problem	ERP approach	Business benefit
1 Repeated data entry	Linked documents	Fewer inconsistent records
2 Missed deliveries	Ordered / delivered / pending quantities	Clearer follow-up
3 Unreliable stock	Recorded movements and counts	Explainable balances
4 Unclear customer debts	Invoices matched with receipts	Visible outstanding amounts
5 Slow reporting	Reconciled source records	More consistent reports
6 Unclear responsibilities	Defined roles and approvals	Accountable handovers

Accurate data and clear procedures are essential. ERP can improve visibility only when teams record transactions consistently.

Full System Overview

Concept illustration

Shared records

Customers · Suppliers · Products · Units · Accounts

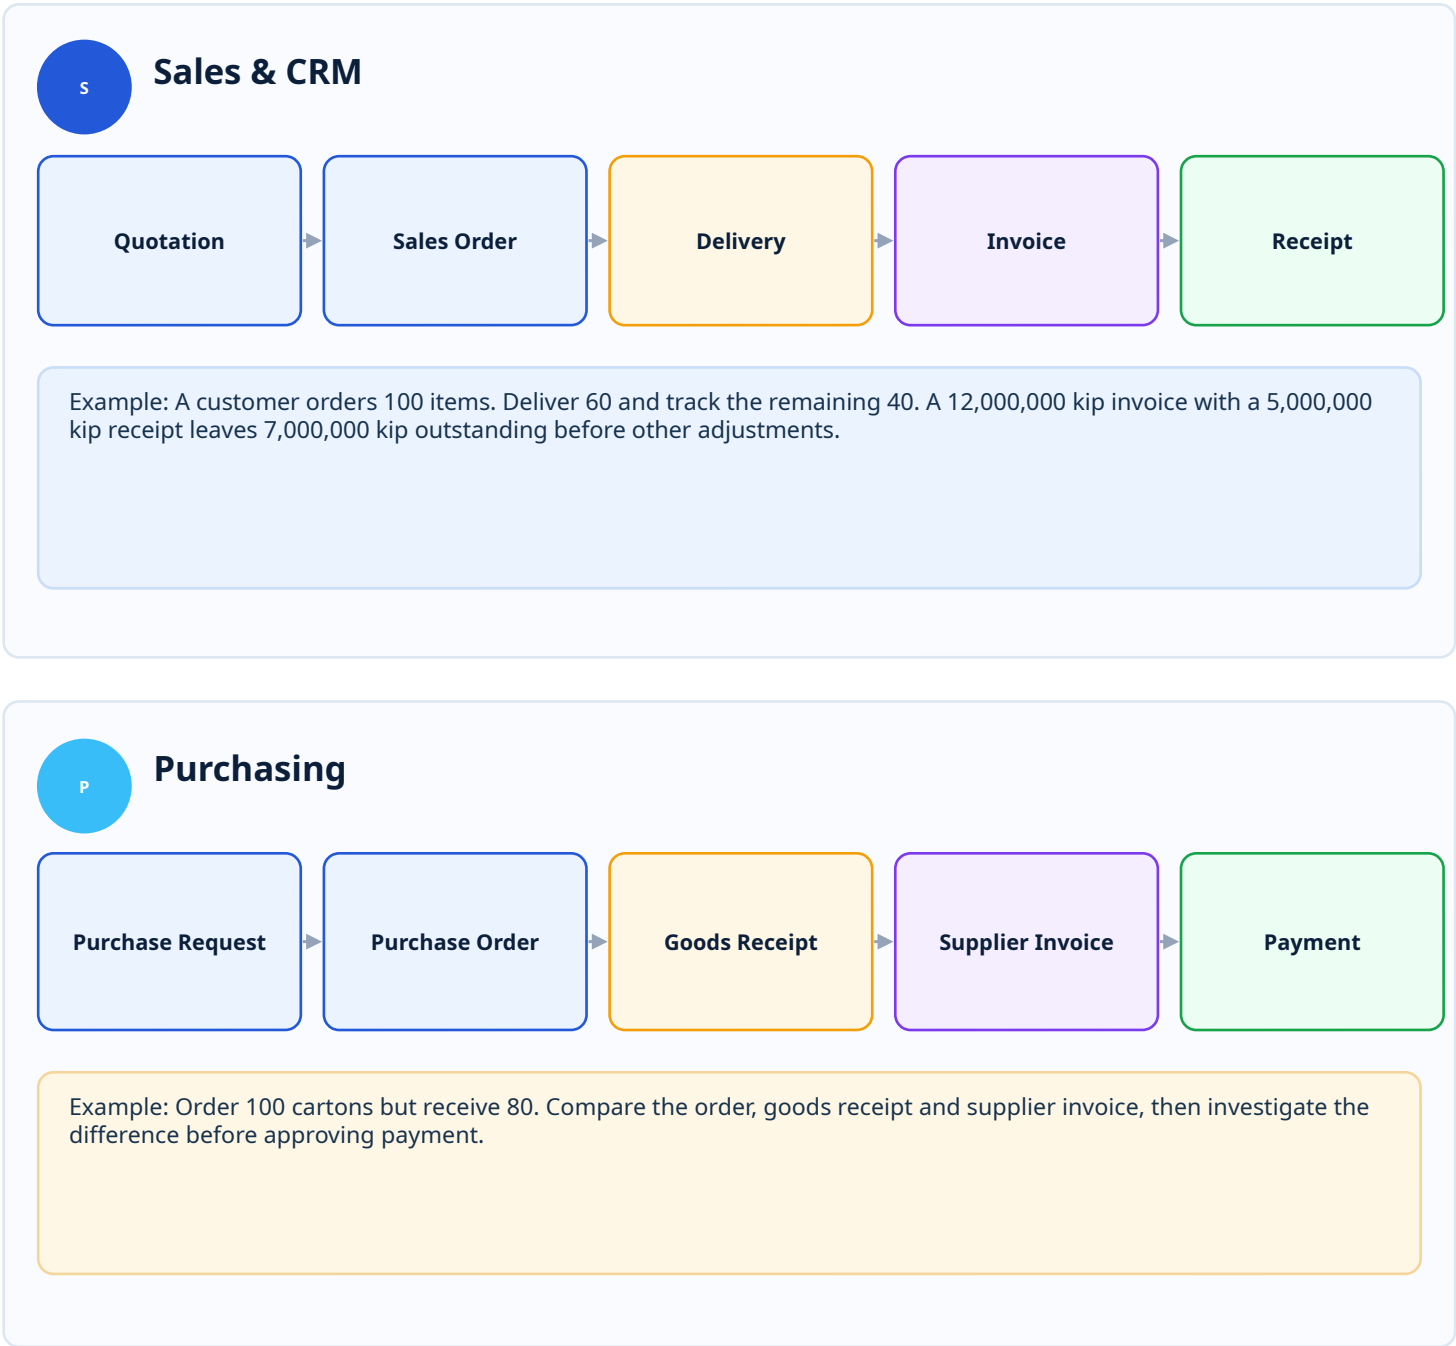

Supporting controls

Roles · Approvals · Branches · Transaction history

This diagram shows intended business relationships. Specific integrations, automations and controls should be confirmed during a demonstration.

Sales and Purchasing Workflows

Concept illustration

Order / commitment

Physical movement

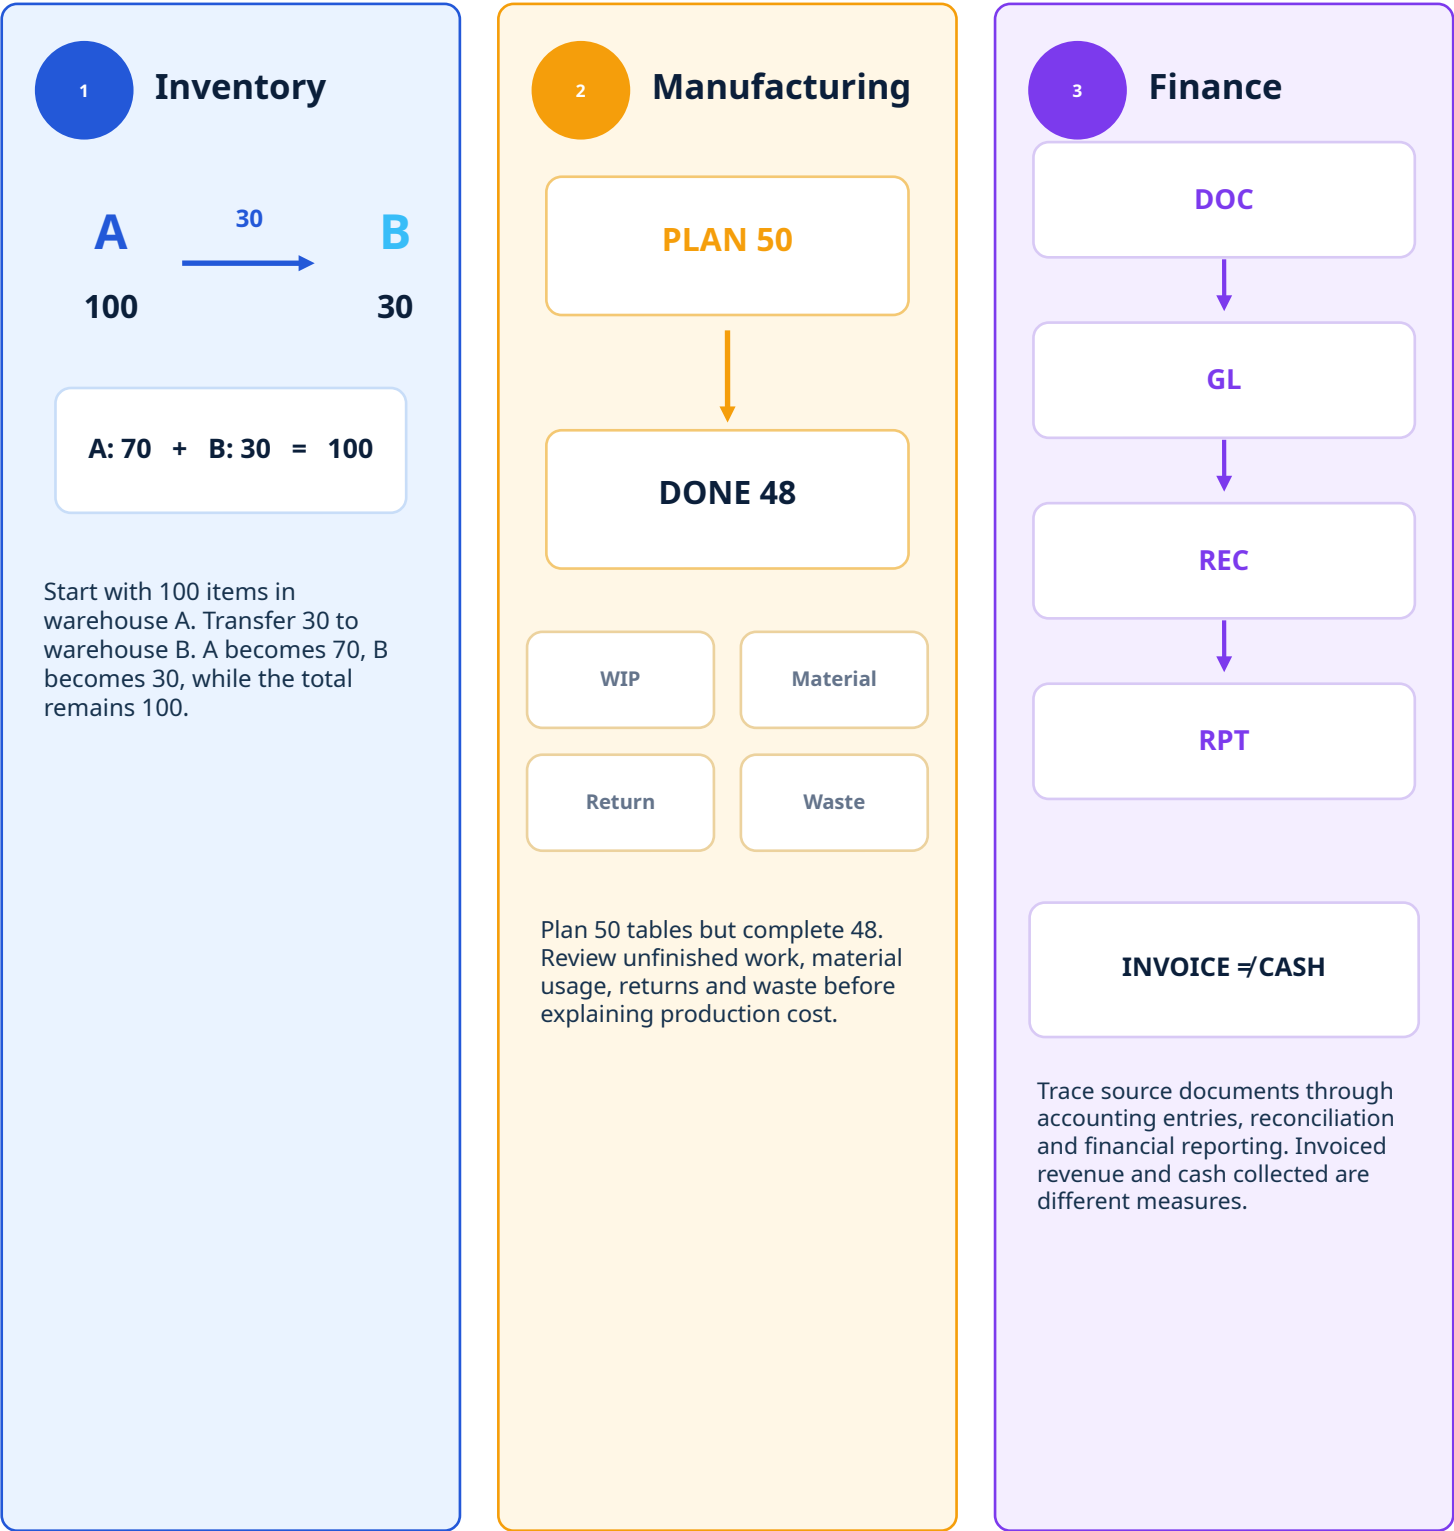

Invoice / liability

Cash / payment

Orders, physical movements, invoices and payments are different business events and should be controlled separately.

Inventory, Manufacturing and Finance

Concept illustration

Costing methods and accounting automation depend on the agreed configuration and supported functionality.

Management and Implementation Risks

Concept illustration

Common implementation mistake → prevention

- Unclear goals

→ Define measurable outcomes
- Poor data

→ Clean and reconcile before migration
- Unclear responsibilities

→ Assign document and process owners
- Too much scope

→ Implement manageable phases
- Insufficient training

→ Practise actual tasks by role
- Incomplete testing

→ Test partial deliveries, returns and corrections
- Rushed launch

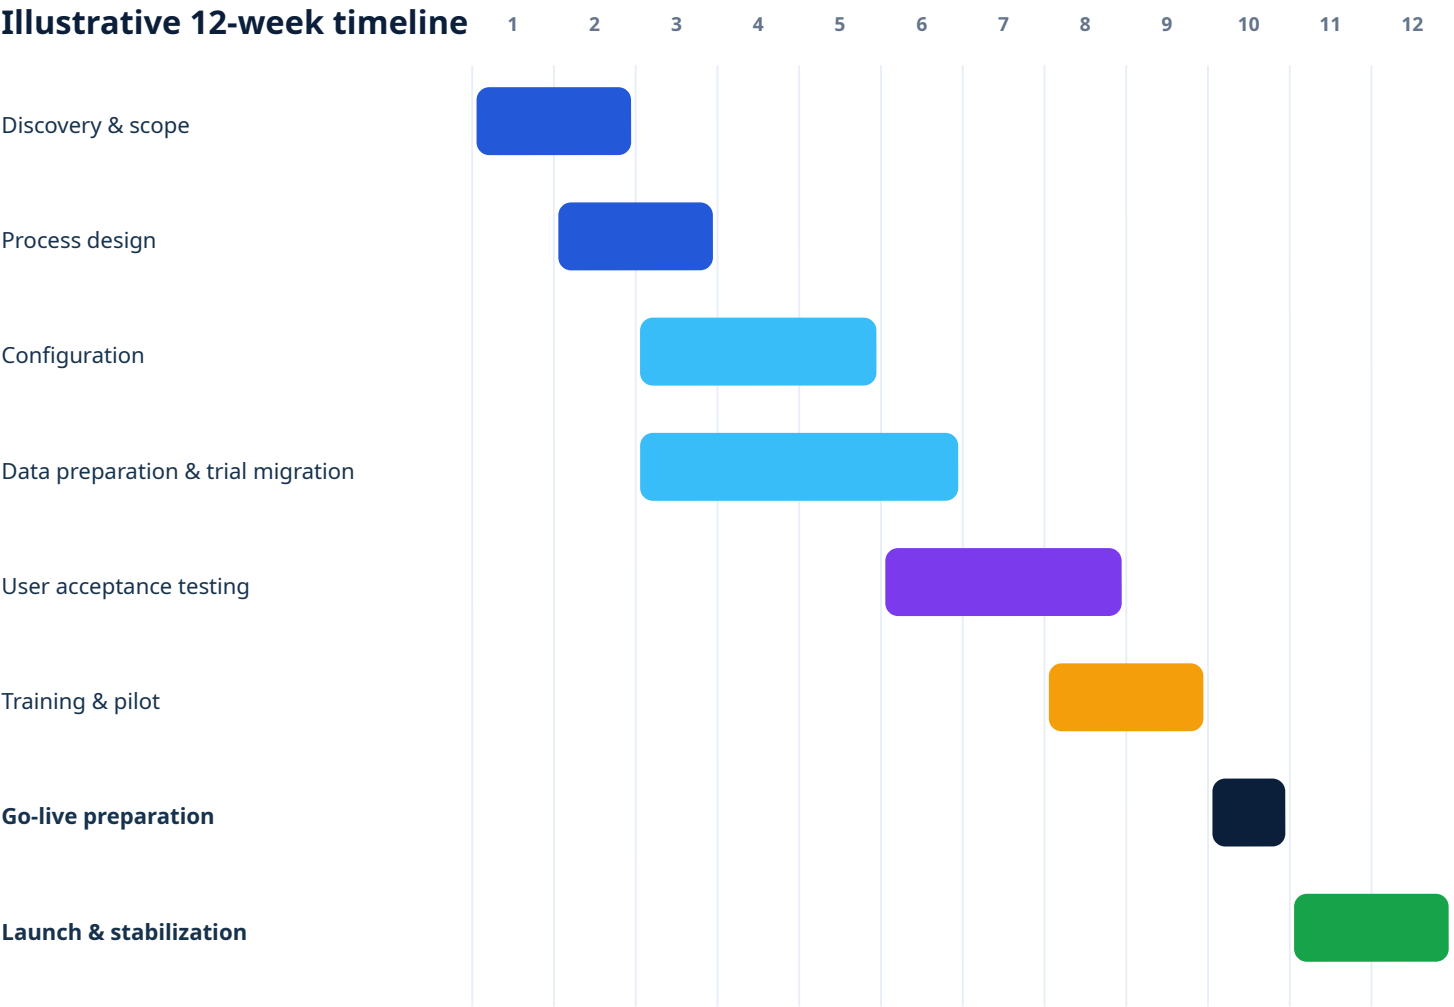

→ Approve readiness before go-live

Good governance connects responsibility to action and keeps decisions visible.

MaluOne ERP Implementation Plan

Concept illustration

Illustrative 12-week timeline

Compact responsibility map

Illustrative schedule. Actual timing depends on agreed scope, data readiness, integrations and customization.
